

# Distribution

Our distribution division works closely with our clients to build, improve and maintain a wide range of distribution networks, both overhead and underground, spanning all voltages. Our capabilities include, but are not limited to, pole replacements, lead cable splicing and repair, energized work, primary and secondary conductor transfers, switching, replacement of transformers and the installation and transfer of underground primary and secondary conductors.

# Safety

Our entire team is committed to providing a safe and healthy work environment. We are fully aware that a safe environment does not occur by chance, it requires close attention and open communication between management and employees.

Preventing accidents is a primary consideration in all phases of our operations and administration. Workers who notice hazards or other safety issues, or who believe that they need additional training, have stop-work authority and are expected to use it to maintain a safe working environment. All supervisors make safety an integral part of his or her management duties and are committed to providing a safe work environment.

# Sustainability

At 5 Star Electric we strive to ensure we use sustainable design and construction practices in everything we do. By purposeful planning and constructing as much as we can in a controlled environment, utilizing materials in a manner to avoid waste and strict compliance with environmental rules and regulations - we minimize the impacts we have on our planet and our communities. Our sustainability practices also apply to our employees. By offering comprehensive benefits and training along with career advancement opportunities to all employees, we can attract and retain our greatest asset - our employees.

A nighttime photograph of a street with several tall, modern streetlights. The lights are illuminated, casting a warm glow. In the background, there are palm trees and some buildings. The sky is dark blue.

# Street Lights

5 Star offers both new construction of street lighting circuits as well as maintenance of existing street lighting.

Our crews have experience with various types of street lighting projects which generally include trenching/boring to accommodate installation of new conduit, installation of new secondary conductor, and installation of new decorative metal poles and lights. Aesthetics are a high priority to our customers and successful completion. We can assist customers with lighting audits and LED energy-efficiency upgrades.
